-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 April 2006.
2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-38 is/are pending in the application.
4a) Of the above claim(s) 1 and 19 is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-38 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: _____.

DETAILED ACTION

This action is responsive to the amendment filed on April 17, 2006. Claims 2-18 and 20-38 are pending.

Response to Amendment

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 2-6, 9, 20-24, 27, 37, and 38 are rejected under 35 U.S.C. 102(e) as being anticipated by Miles et al., U.S. Patent No. 6,665,495.

Miles teaches the invention as claimed including a non-blocking scalable optical router having an architecture that optimizes bandwidth management to allow for non-blocking switching and routing of optical data packets (see abstract).

Regarding claim 37, Miles teaches an external processor for a network access system having a programmable access device, said external processor comprising:

a message processor configured to parse a message for determining a type of communication service (col. 26, line 64 – col. 27, line 14, Miles discloses a packet classification module);

a service controller configured to receive the message if the type of communication service corresponds to the service controller, wherein the service controller determines a policy based on the message and generates a control signal according to the policy (col. 27, lines 38-64, col. 28, lines 24-32, Miles discloses policy based routing, a QoS controller, and a classification index based on QoS/policy); and

a programmable access device (PAD) controller configured to receive the control signal for configuring a PAD to enforce the policy with respect to a network connection between a first network and a second network (col. 28, lines 33-49, Miles discloses a classification index sent to an optical switch core which then routes the packets to the appropriate destination).

Regarding claim 2, Miles teaches the external processor of claim 37, wherein the external processor includes a plurality of service controllers including said service controller, wherein each of said plurality of service controllers implements a respective one of a plurality of services (col. 27, lines 38-64, col. 28, lines 24-49; Miles discloses the use of different controllers).

Regarding claim 3, Miles teaches the external processor of claim 2, wherein the plurality of service controllers includes primary and secondary service controllers for a

Art Unit: 2157

particular service among said plurality of services, and wherein the secondary service controller provides said particular service to said programmable access device if said primary service controller fails (col. 31, lines 1-19; Miles discloses the use of deflection routing).

Regarding claim 4, Miles teaches the external processor of claim 2, wherein said plurality of service controllers includes a second service controller in communication with said first service controller such that a network message can be serviced by both of said first service controller and said second service controller (col. 25, lines 7-22, Miles discloses unit controllers used for message exchange).

Regarding claim 5, Miles teaches the external processor of claim 2, wherein the external processor is coupled to a plurality of programmable access device, and wherein at least one of the plurality of service controllers performs selectively service processing for a portion of said plurality of programmable access devices (col. 9, lines 1-12, col. 10, lines 27-51; Miles discloses multiple switch cores with different functions).

Regarding claim 6, Miles teaches the external processor of claim 37, wherein the service controller includes means for injecting a packet into a traffic flow handled by the programmable access device (col. 28, lines 33-49; Miles discloses the super packets sent by the QoS controller to the optical switch core which are then injected in to traffic flow).

Regarding claim 9, Miles teaches the external processor of claim 37, and further comprising a reporting processor that provides an interface through which a reporting event received from the programmable access device is communicated to the service controller (col. 28, line 33 – col. 29, line 17; Miles discloses event information transferred between the optical switch core and the QoS controllers module).

Claims 20-24, 27, and 38 do not teach or define any new limitations above claims 2-6, 9, and 37 and therefore are rejected for similar reasons.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7, 8, 10, 11, 25, 26, 28, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miles further in view of Gai et al., U.S. Patent No. 6,167,445.

Miles teaches the invention substantially as claimed including a non-blocking scalable optical router having an architecture that optimizes bandwidth management to allow for non-blocking switching and routing of optical data packets (see abstract).

As to claims 7, 8, 25, and 26, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including a service policy interface through which the service controller requests policy decisions from a policy server and a policy cache that selectively caches policies obtained from the policy server.

However, Gai teaches a method and apparatus for applying high-level, quality of service policies at dissimilar computer network devices (see abstract). Gai teaches the use of policy servers (col. 5, lines 63-67; col. 6, lines 1-26) and a policy translator with storage (col. 9, lines 59-67; col. 10, lines 1-34).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Gai to use a service policy interface through which the service controller requests policy decisions from a policy server and a policy cache that selectively caches policies obtained from the policy server. One would be motivated to do so because policy servers allow a set of rules that can be applied to the network and the policy cache allows for those rules to be more quickly accessible.

As to claims 10, 11, 28, and 29, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including a signaling controller that transmits signals, that specify a quality of service, to configure network hardware to provide network connections.

However, Gai teaches a method and apparatus for applying high-level, quality of service policies at dissimilar computer network devices (see abstract). Gai teaches the use of signals with a quality of service (col. 6, lines 27-67; col. 7, lines 1-29).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Gai to use a signaling controller that transmits signals, that specify a quality of service, to configure network hardware to provide network connections. One would be motivated to do so because signals with a specific quality of service help make efficient traffic management decisions.

5. Claims 12, 13, 30, and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miles further in view of Bullock et al., U.S. Patent No. 6,631,414.

Miles teaches the invention substantially as claimed including a non-blocking scalable optical router having an architecture that optimizes bandwidth management to allow for non-blocking switching and routing of optical data packets (see abstract).

As to claims 12, 13, 30, and 31, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising a session management means for causing the programmable access device controller to signal the programmable access device to end a Transport Control Protocol (TCP) session receiving enhanced service and wherein the session management means comprises means for causing the programmable access device controller to signal the programmable access device to delete the TCP session state in response to a session activity level.

However, Bullock teaches incoming and outgoing communications between peer nodes requiring only a single line per dedicated peer (see abstract). Bullock teaches

the use of a session manager job event handler that ends and deletes a TCP session in response to a session activity level (col. 8, lines 46-67; col. 9, lines 1-13).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bullock to use a service controller comprising a session management means for causing the programmable access device controller to signal the programmable access device to end a Transport Control Protocol (TCP) session receiving enhanced service and wherein the session management means comprises means for causing the programmable access device controller to signal the programmable access device to delete the TCP session state in response to a session activity level. One would be motivated to do so because if there is no activity on a TCP session then it should be ended and deleted so that no more packets will be sent to it.

6. Claims 14-18 and 32-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miles further in view of Bowman-Amuah, U.S. Patent No. 6,442,547.

Miles teaches the invention substantially as claimed including a non-blocking scalable optical router having an architecture that optimizes bandwidth management to allow for non-blocking switching and routing of optical data packets (see abstract).

As to claims 14 and 32, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising a conference call service controller.

However, Bowman-Amuah teaches information service management in hybrid communication network system, including data and communications management (see abstract). Bowman-Amuah teaches the use of an automated callback system for call setup and control of a conference call (col. 39, lines 14-67; col. 40, lines 1-5).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bowman-Amuah to use a service controller comprising a conference call service controller. One would be motivated to do so because it would allow the invention to handle conference calls.

As to claims 15 and 33, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising an e-commerce service controller.

However, Bowman-Amuah teaches information service management in hybrid communication network system, including data and communications management (see abstract). Bowman-Amuah teaches the use of "Next Generation Network" architecture enabling E-Commerce services (col. 14, lines 59-67; col. 15, lines 1-27).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bowman-Amuah to use a service controller comprising an e-commerce service controller. One would be motivated to do so because it would allow the invention to participate in e-commerce.

As to claim 16 and 34, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising an Internet protocol telephony service controller.

However, Bowman-Amuah teaches information service management in hybrid communication network system, including data and communications management (see abstract). Bowman-Amuah teaches the use of a "Next Generation Network" cable infrastructure that can provide IP based telephony services (col. 19, lines 43-60).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bowman-Amuah to use a service controller comprising an Internet protocol telephony service controller. One would be motivated to do so because it would allow the invention to handle IP telephony.

As to claims 17 and 35, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising a reserved bandwidth service controller.

However, Bowman-Amuah teaches information service management in hybrid communication network system, including data and communications management (see abstract). Bowman-Amuah teaches the use of a predetermined amount of bandwidth (col. 4, lines 7-65).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bowman-Amuah to use a service controller comprises a reserved bandwidth service controller. One would be motivated to do so because it would help avoid bandwidth congestion.

As to claims 18 and 36, Miles teaches the method of claims 37 and 38.

Miles fails to teach the limitation further including the service controller comprising a multicast service controller.

However, Bowman-Amuah teaches information service management in hybrid communication network system, including data and communications management (see abstract). Bowman-Amuah teaches the use a of Real-Time Transport Protocol for transmission of real-time data over multicast networks (col. 40, lines 34-67; col. 41, lines 1-58).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Miles in view of Bowman-Amuah to use a service controller comprising a multicast service controller. One would be motivated to do so because it would allow the invention to multicast.

Response to Arguments

7. Applicant's arguments filed April 17, 2006 have been fully considered but they are not persuasive. The declaration submitted is not properly executed and does not adequately demonstrate prior invention. The examiner has bolded the important sections that were missed by the applicant.

1. FORMALITIES:

2. The declaration needs to be signed by all inventors and was only signed by one of the three; please see below for guidance from the MPEP.

715.04 [R-2] Who May Make Affidavit or Declaration; Formal Requirements of
Affidavits and Declarations

I. >< WHO MAY MAKE AFFIDAVIT OR DECLARATION

The following parties may make an affidavit or declaration under 37 CFR 1.131:

- (A) All the inventors of the subject matter claimed.
- (B) An affidavit or declaration by less than all named inventors of an application is accepted where it is shown that less than all named inventors of an application invented the subject matter of the claim or claims under rejection. For example, one of two joint inventors is accepted where it is shown that one of the joint inventors is the sole inventor of the claim or claims under rejection.
- (C) If a petition under 37 CFR 1.47 was granted or the application was accepted under 37 CFR 1.42 or 1.43, the affidavit or declaration may be signed by the 37 CFR 1.47 applicant or the legal representative, where appropriate.
- (D) The assignee or other party in interest when it is not possible to produce the affidavit or declaration of the inventor. Ex parte Foster, 1903 C.D. 213, 105 O.G. 261 (Comm'r Pat. 1903).

Affidavits or declarations to overcome a rejection of a claim or claims must be made by the inventor or inventors of the subject matter of the rejected claim(s), a party qualified under 37 CFR 1.42, 1.43, or 1.47, or the assignee or other party in interest when it is not possible to produce the affidavit or declaration of the inventor(s).

As none of the conditions for signature by less than all the inventors has been demonstrated, the submission does not qualify as a proper declaration, is inadequate on its face and is entitled to no weight.

In order to move on with prosecution the Examiner would like to point out some substantive deficiencies with the proposed declaration. These comments are illustrative and not comprehensive. The burden is on applicant to provide a proper declaration if that is the method chosen for overcoming a rejection.

The affidavit needs to point out that the country in which the acts relied upon to show prior invention took place is one in which the acts can be credited (e.g., US or NAFTA after relevant date).

The Examiner would like to include some important sections from the MPEP for the applicant's guidance:

"A general allegation that the invention was completed prior to the date of the reference is not sufficient. *Ex parte Saunders*, 1883 C.D. 23, 23 O.G. 1224 (Comm'r Pat. 1883). Similarly, a declaration by the inventor to the effect that his or her invention was conceived or reduced to practice prior to the reference date, without a statement of facts demonstrating the correctness of this conclusion, is insufficient to satisfy 37 CFR 1.131."

"The affidavit or declaration and exhibits must clearly explain which facts or data applicant is relying on to show completion of his or her invention prior to the particular date. Vague and general statements in broad terms about what the

exhibits describe along with a general assertion that the exhibits describe a reduction to practice “amounts essentially to mere pleading, unsupported by proof or a showing of facts” and, thus, does not satisfy the requirements of 37 CFR 1.131(b). In re Borkowski, 505 F.2d 713, 184 USPQ 29 (CCPA 1974). **Applicant must give a clear explanation of the exhibits pointing out exactly what facts are established and relied on by applicant.** 505 F.2d at 718-19, 184 USPQ at 33. See also In re Harry, 333 F.2d 920, 142 USPQ 164 (CCPA 1964) (Affidavit “asserts that facts exist but does not tell what they are or when they occurred.”).

The applicant needs to show how the exhibits support the claimed invention. Merely pointing to exhibits and stating that they show the claimed invention is not sufficient. A clear explanation of how the exhibits support conception of the claimed invention must be part of the declaration

Regarding diligence, the applicant is required to be specific as to dates and facts. The declaration provides no dates for the acts relied upon for diligence and all dates have been redacted from the supporting exhibits.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
